

## CS 424 Low Foaming Cleaner

### Description

CS 424 is a low foaming heavy duty alkaline cleaner for food contact surfaces and processing equipment. CS 424 is specially formulated to quickly penetrate and solubilize soils in spray applications. CS 424 works quickly and rinses easily from treated surfaces, properly cleaning the surface in preparation for sanitizer application.

### Benefits

- Fast acting cleaning power
- Low foaming and easily rinsed
- Hard water compatible
- Concentrated for cost effectiveness

### Principle Use

CS 424 is an ideal cleaner for spray applications requiring low foam generation. It can be sprayed onto equipment, containers, and other food contact surfaces where a rapid cleaning punch is required. CS 424 solution should be replenished and changed out as needed in recycled applications such as bin or lug washing treatments.

### Directions

Apply CS 424 in a diluted spray solution to empty harvest containers such as plastic bins or lugs, and to stainless steel food processing equipment. Apply at a rate of 1 ounce per gallon of water. Adjust concentration as needed based upon cleaning effectiveness in the specific application. Change out recycled solutions as needed and at least on a daily basis to maintain cleaning effectiveness. Follow application with a potable water rinse prior to sanitizing food contact surfaces.
